Active Recovery	Upper Body Lower Body	Upper Body Lower Body	Upper Body Lower Body	Upper Body Lower Body	Upper Body Lower Body	Upper Body Lower Body	Upper Body Lower Body

Muscles to target for Strength Training/Active Recovery

Upper Body: Upper and Lower Back, Abs, Triceps, Biceps and Traps

Lower Body: Quads, Hamstrings, and Calves

- Strength training 3x a week
- Start with the Endurance Program week 1
- Use the Resistance Program week 2
- Alternate the Endurance and Resistance programs thereafter
- Increase level and intensity at your desired rate
- Active Recovery should be used after every workout – particularly after strenuous activity when muscles are ready to cramp.

The Endurance program targets slow twitch fibers (type 1)

The Resistance program targets both slow and fast twitch fibers (type 1 & 2)

Upper / lower back

Abs

Triceps / Biceps

Quads

Hamstrings

Calves

Traps
